in this book lawrence sklar demonstrates the interdependence of science and philosophy by examining a number of crucial problems on the nature of space and time problems that require for their resolution the resources of philosophy and of physics the overall issues explored are our knowledge of the geometry of the world the existence of spacetime as an entity over and above the material objects of the world the relation between temporal order and causal order and the problem of the direction of time without neglecting the most subtle philosophical points or the most advanced contributions of contemporary physics the author has taken pains to make his explorations intelligible to the reader with no advanced training

in physics mathematics or philosophy the arguments are set forth step by step beginning from first principles and the philosophical discussions are supplemented in detail by nontechnical expositions of crucial features of physical theories

frank arntzenius presents a series of radical ideas about the structure of space and time and establishes a new metaphysical position which holds that the fundamental structure of the physical world is purely geometrical structure he argues that we should broaden our conceptual horizons and accept that spaces other than spacetime may exist

this 1973 book discusses einstein s general theory of relativity and its predictions concerning black holes and singularities in space time itself

the study of mathematical cognition and the ways in which the ideas of space time and number are encoded in brain circuitry has become a fundamental issue for neuroscience how such encoding differs across cultures and educational level is of further interest in education and neuropsychology this rapidly expanding field of research is overdue for an interdisciplinary volume such as this which deals with the neurological and psychological foundations of human numeric capacity a uniquely integrative work this volume provides a much needed compilation of primary source material to researchers from basic neuroscience psychology developmental science neuroimaging neuropsychology and theoretical biology the first comprehensive and authoritative volume dealing with neurological and psychological foundations of mathematical cognition uniquely integrative volume at the frontier of a rapidly expanding interdisciplinary field features outstanding and truly international scholarship with chapters written by leading experts in a variety of fields

this book examines issues related to the concepts of space time and causality in the context of modern physics and ancient indian traditions it looks at the similarity and convergence of these concepts of modern physics with those discussed in ancient indian wisdom the volume brings the methodologies of empiricism and introspection together to highlight the synergy between these two strands it discusses wide ranging themes including the quantum vacuum as ultimate reality quantum entanglement and metaphysics of relations identity and individuality and dark energy and anti matter as discussed in physics and in indian philosophical schools like vedanta yoga buddhist kashmiri shaivism and jaina philosophy first of its kind this book will be an essential read for scholars and researches of philosophy indian philosophy philosophy of science theoretical physics and social science

general relativity and quantum field theory the glaring theoretical problem for 21st century physics is how to unite the two great theories of 20th century physics i have done just this by considering the problem from a fresh new perspective the result is a theory that is mathematically simple and elegant based on one postulate i am able to derive a very simple mathematical formulation using this formulation i find results for the schwarzchild radius of a black hole the bounce of a neutron in earth s gravity and the entropy of a black hole i also have discovered that space time is in fact a conserved quantity

a quarterly journal in modern foreign literatures

this introduction to one of the liveliest and most popular fields in philosophy is written specifically for a beginning readership with no background in philosophy or science step by step analyses of the key arguments are provided and the philosophical heart of the issues is revealed without recourse to jargon maths or logical formulas the book introduces einstein s revolutionary ideas in a clear and simple way along with the concepts and arguments of philosophers both ancient and modern that have proved of lasting value specifically the theories of the ancient greek philosophers zeno euclid and parmenides are considered alongside the ideas of newton leibniz and kant as well as the giants of twentieth century physics einstein and lorentz the problems at the heart of the philosophy of space and time such as change motion infinity shape and inflation are examined and the seismic impact made by relativity theory and quantum theory is assessed in the light of the latest research the writing is lucid and entertaining allowing a beginning readership to grasp some difficult concepts while offering the more experienced reader a succinct and illuminating presentation of the state of the debate space time and einstein shows the reader the excitement of scientific discovery and the beauty of theory in the search for answers to these fundamental questions
